Good News for owners/operators of Dynopack chassis dynamometers:

Increase the revenue-earning potential of your existing Dynopack equipment with the new MOTOLINK motorcycle dynamometer adapter system (*Patent Pending*).

For a fraction of the cost of a dedicated motorcycle dynamometer, the MOTOLINK adapter system will allow you to test most motorcycles using your existing Dynopack equipment while still retaining full access to all its features.

The fully adjustable MOTOLINK system can be adapted to suit almost any chain drive or belt drive motorcycle. Its rugged, simple design ensures ease of operation, whilst extensive trials have proven its dependability.

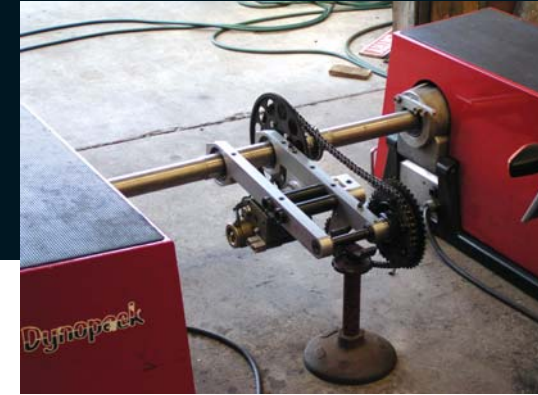

The MOTOLINK adapter system replaces the rear wheel of the motorcycle, in the same way as the Dynopack is currently used with cars, eliminating the risk of unseen and potentially lethal damage to the tyre and also releasing the need to strap down the bike, or even have the operator sitting on the bike during operation.

The standard MOTOLINK adapter system allows the testing of motorcycles with dual-sided swing arms, with left or right side chain drive and left or right side belt drive.

Along with the standard Motolink adaptor, comes everything that allows this to be a stand alone system. This includes:

- Drive chain and a large selection of sprockets to ensure optimum gearing for any motorcycle.
- Chain guard.
- Motorcycle support stands.
- Safety barrier.
- All the tools required for set-up and adjustment of the MOTOLINK system.
- Starter motor kit with all cables and remote starter button (battery not included). This option allows you to test race bikes, classic bikes and dirt bikes that are not fitted with self-starters.
- This is all fitted into a transport container, which has wheels, so that it can easily be stored away.

The MOTOLINK adapter system offers the following options:

- A single-sided swing arm adapter suitable for Ducati, Triumph and MV Agusta.
- We are currently developing a system that will allow Shaft Driven motorcycles like Moto Guzzi and BMW to also be used with this system.
- Special order parts can be manufactured to meet individual customers' unique requirements.

Single Sided Swing Arm adaptor for Ducatis, MVs and Triumphs
